PROFILE

Biomedical Engineering graduate specialized in Biomedical Instrumentation, with a keen interest in biomechanics and medical engineering.

Experienced in musculoskeletal simulation and wearable assistive device development.

Eager to contribute to innovation in medical devices and rehabilitation technologies.

LANGUAGES

Italian: Native
English: B2 (Cambridge First Certificate)

EDUCATION

Master's Degree in Biomedical Engineering

Politecnico di Torino, Turin 2023- 2026

Biomedical Instrumentation specialization.

Thesis: "Simulaton based design and musculoskeletal modeling of FeatherExo for hip-extension assistance during gait".

Bachelor's Degree in Biomedical Engineering

Politecnico di Torino, Turin 2019 - 2023

Final Project: "Applicazione di algoritmi di denoising su immagini in fluorescenza per GAN".

High School Diploma

Liceo Scientifico "Maria Curie", Pinerolo (TO) 2014 - 2019

EXPERIENCES

Guest Student

Istituto Italiano di Tecnologia (IIT) Nov 2025 -
Rehab Technologies, Genoa July 2026

Contributed to the simulation-based design and validation of a lower-limb exoskeleton for Parkinson's disease patients, working at the intersection of mechanical engineering, biomechanics, and computational modelling.

- Built a high-fidelity digital twin of the human-exoskeleton system (OpenSim), integrating hardware kinematics and compliant transmission mechanics;
- Formulated and solved optimal control problems (NLP) to simulate and predict human-machine interaction under real-use conditions;
- Quantified device performance across three biomechanical metrics: mechanical unloading, neuromotor adaptation, and metabolic relief, providing data-driven design feedback.

Curricular Intern

Politecnico di Torino Sept 2022 -
Turin March 2023

Utilized a MATLAB GUI to apply BM3D and CLAHE denoising algorithms on fluorescence microscopy images (cell clones, cardiospheres), pre-processing datasets for GAN training

COMPUTER SKILLS

- Programming: MATLAB, Python
- Software: Blender (basic level), Microsoft Office, Meshlab, Mokka, OpenSim, Solidworks, Unity 6 (basic level).
